

Most sports clubs carry out their own daily maintenance of their synthetic turf. We believe this maintenance should be done with quality equipment, in the same way a contractor would do the work. Since with quality, one will produce quality! The Tbrush is a triangle brush that can be used for the daily maintenance of your synthetic turf pitches. This, our most straightforward brush, has been constructed with a premium steel frame in combination with completely synthetic brushes. These synthetic brushes provide you with a major advantage, since they will not decay due to the effects of water.

Due to the compact size and low weight of the brush, the Tbrush is extremely mobile. GKB will deliver the Tbrush with transport wheels and a tow chain as standard. Consequently, the Tbrush is easy to operate and won't take up too much storage space when you are not using it.

The Tbrush is suitable to brush synthetic turf pitches with several types of infill; for instance, rubber, sand, or cork. When you brush your pitch on a regular basis, it can prevent reduced drainage, deteriorated sport technical characteristics, for instance, compaction or a filthy impression of your pitch. A brushed pitch will retain the appearance from the day of the commissioning.
