

# GKB Topdrop

Do you want to provide your sports pitch or golf course with the accurate amount of sand? Do you want to provide your synthetic turf with infill material in a simple way, for instance during the construction? Or do you want to accurately apply another material? With the Topdrop it is possible to accurately apply several materials.

The Topdrop is a premium brush dresser, with which you can accurately apply several materials. By means of a conveyor belt, the sand is transported to the mechanical adjustable metering valve. Since the brush is hydraulically powered, the quantity of material applied can accurately be determined.

The Topdrop is available in three distinctive designs, from 1 m<sup>3</sup> up to 3.3m<sup>3</sup> in size. Every design is provided with four pivoting balloon tires, in order to provide the perfect weight distribution on your sports pitch or golf course. If you are also driving on the public road with the Topdrop, then you should choose to attach an overrun brake or hydraulically powered brakes. Together with the modern LED lighting system, the Topdrop is ready for use on the public road.
